

# Gain better visibility on MRO Spares Data

In order to better manage assets, enterprises are constantly striving to step up operational efficiencies, by adopting best industry practices..

Management of MRO spares can become complex, when sub optimal policies are practiced. The issues compound, when you are confronted with redundant and inaccurate data.

Hofinsoft backed by its proven expertise, process frameworks and novel software tools helps you to radically transform asset data, processes and policies. Hofinsoft assists you in establishing a highly efficient and accurate MRO Spares and Materials Data Management System over the entire life-cycle of :

• Specification • Procurement • Receiving & Storing • Issuing • Disposal

Hofinsoft achieves this for both new plants and facilities, as well as on-going operations :

## ➔ Green-field projects & New Facilities

- **Initial Spares Review:** Optimization of spares required during the initiation phase
- **SPiR:** Interchangeability of spare parts and assemblies ensures efficient management of parts and facilitates maintenance
- **Material Catalogue with scientific data classification and comprehensive buying-specification:** Enables all the stake holders (Procurement, Inventory management, Finance, Maintenance, Vendors & Sub-contractors) to perform their tasks efficiently
- **Procurement and Receiving Services:** Efficient support to order and expedite the delivery, as well as ensure the materials alongwith required documentation are in compliance with the Purchase order

## ➔ On-going Operations

- **Data cleansing & enrichment:** Enables all the stake holders (Procurement, Inventory management, Finance, Maintenance, Vendors & Sub-contractors) to perform their tasks efficiently
- **Optimization of ERP usage:** Tweaking of functions and features of the ERP system to improve efficiency
- **Physical verification& Reconciliation:** Physical verification& Reconciliation: Identifies the items in stocks and provides variance with the balance as per computer records
- **Warehouse related services:** Bring in efficiency of operations through services like bar-coding / material re-arrangement
- **Inventory Optimization:** Set up optimal inventory policy and optimization of reorder levels and quantities

Hofinsoft is a Premier Microsoft ISV, with niche products and focused solutions in the Materials & Maintenance Management arena. Over a decade, it has notched up a prestigious roster of asset intensive industry clients, spanning North America, Middle East, Africa and India. As an ISO 9001 Certified company, it has constantly endeavoured to refine business processes and methodologies, to better address the dynamic needs of customers.

## Other Data and Asset Management related work

In addition to the above, Hofinsoft 's experienced consultants also provide other services:

- Development of Bill of Material (BoM)
- Service Masters

## Outsourced Services

A material master not maintained efficiently after a data cleansing project will be prone to data inconsistency. Hofinsoft has been successfully offering efficient cost effective material master updation services through a combination of onsite, near-shore and off-shore delivery frameworks. We manage the data associated to the material master, including creation of new items as per your approval process and continuous data cleansing including enhancements using iNomcat.

Hofinsoft also provides services towards updation and maintenance of BOM, Services Master and Vendor Master, UOM Master and other Master-data related content.

## iNomcat – Catalogue Management Tool

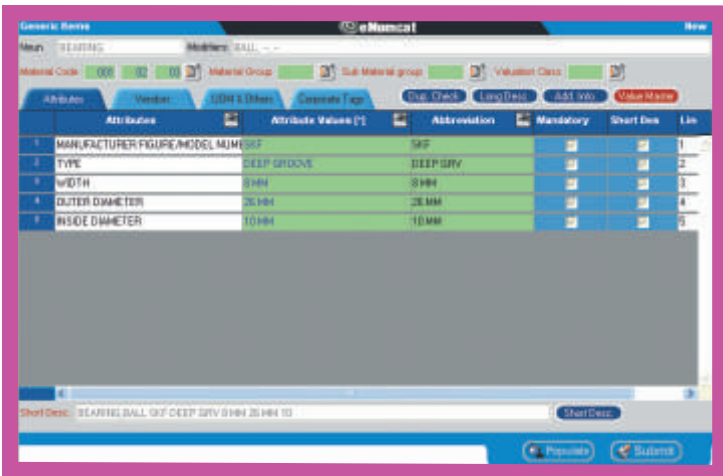

iNomcat is the flexible and intelligent Catalogue Management tool that is used to create industry standard materials and spares catalogue with enriched

With its :

- Multi-layer classification capability
- Exhaustive dictionary-bank
- Powerful search engine
- Matchless capability for duplication detection
- Multi-stage workflow capability for quality assurance
- plugs into major enterprise software applications
- enterprise class security

iNomcat is an ideal tool for deployment in data enrichment projects to help achieve dramatic improvements in asset management and enhance your decision making capabilities.

iNomcat is also an ideal platform to create new items – it facilitates development of comprehensive attribute-based buying-specification and eliminates introduction of duplicate items into the system.
